

Math.random()을 써볼까.?

```
const sample_num = 424242;
let sample_data = []
let i = 0;

while (i < sample_num)
{
    sample_data.push(Math.random());
    i++;
}

const display_sampling = [{
    x: sample_data,
    type: 'histogram',
    xbins: {
        end: 1,
        start: 0
    }
}];

Plotly.newPlot('display_sampling', display_sampling);
```
